

MITP Instructions

B&W's expectation for the Manufacturing Inspection and Test Plan is to show an outline of manufacturing/fabrication processes infused with inspection/testing points to communicate to B&W specifically how vendors ensure that they will supply a product that meets or exceeds our requirements.

A successful MITP will be analogous to a blending of supplier's project schedule with their Quality manual. We want to see how the seller will make and inspect/test the product(s) that the supplier will be providing to B&W.

The MITP template found on this Web site was developed to assist suppliers' efforts in meeting B&W's Purchase Order and Quality system requirements. This is a master template that could be used to cover a vast array of commodities; therefore not all columns may apply to a given scope. The required elements of an acceptable MITP are indicated in red.

Note: Use of this form is not mandatory, but can be used as a guide in developing an acceptable MITP.
