The Diamond Power® GlassCam™ high-resolution camera, provided by Babcock & Wilcox (B&W), features a two-color temperature measurement for highly accurate readings. The GlassCam camera provides high-resolution images, has no moving parts, and has a variety of mounting configurations that can be incorporated to meet installation requirements.

The GlassCam high-resolution camera can view the batch product in the melt tank just before it is ready to exit, and provides temperature feedback to the operators so that burner adjustments can be made to meet the optimum material temperature. The camera is mounted in a furnace port looking into the melting zone area and provides an important insight for improving product quality.

The Diamond Power exclusive TempVu® software system used with the GlassCam camera has up to 15 user-definable temperature regions, and single- or multi-point region averaging. This allows the user to select multiple regions of interest, and of varying sizes and shapes. The system also features automatic temperature data storage at user-defined intervals to provide historical data for trending or issue analysis. A complete color palette is available for colorizing the monochrome video images, providing the operator with the ability to choose between seeing the monochrome image, or a pseudo-color image which best shows the natural colors in the glass furnace.

**Benefits**

- Accurate temperature readings eliminate the need to know the material emissivity
- Improves product quality
- Less maintenance than conventional cameras
- Longer mean time between failure (MTBF)
- Produces high-resolution digital images
- Reduces the amount of cooling air required
- Wide temperature range
- Provides a variety of mounting configurations
- Unique dual-walled construction isolates and seals the camera against contaminates

**Features**

- Two-color temperature measurement for higher accuracy
- No moving parts
- High resolution 1024 x 768 SVGA images
- High resolution/temperature optical probe
- Temperature range = 1400 to 3000°F (760 to 1649°C)
- Diamond Power TempVu technology provides:
  - Up to 15 user-definable temperature regions
  - Single- or multi-point region averaging
  - Bitmap image storage
  - Automatic temperature data storage at user-defined intervals
  - Color palette for colorizing the monochrome video image
  - Individual contrast and brightness control
  - Auto-archive of bitmap images
  - Sequential switching of cameras
  - Graphical trending of temperature regions
  - 4 to 20 mA output
- Proprietary HTH-8 high-temperature camera housing
  - Dual-wall construction housing
  - Can use water- or air-cooling
